Parameter Representatives

Steve Hedetniemi, Clemson University
Sarah Holliday, Kennesaw State University*
Pete Johnson, Auburn University

In 2017, Hedetniemi asked the question "for which graphs does the set of neighborhoods form a system of distinct representatives?" At Boca, we answer that question, which is not obvious, and explored necessary conditions and associated parameters. Now, we move on to other families of graph parameters and how they do or do not form a system of distinct representatives
